

Hearing Loss Prevention

Estimated time to complete: 15 minutes

Course Description

SafeSchools Hearing Loss Prevention course is a concise tutorial designed for all school staff. Noise induced hearing loss is entirely preventable and comes from a variety of environmental factors which we often fail to consider. The course covers the basics of hearing loss prevention and effective strategies for reducing hearing loss.

Common Themes

- The basics of hearing loss prevention
- Definition of noise as well as common examples on campus
- Various controls to eliminate noise
- Review of Personal Protective Equipment (PPE) related to noise attenuation
- Discussion of OSHA standards for hearing loss prevention

Author

James Vaughan is president of Today's Resources, Inc. (TRI), a full-service safety and health consulting firm. Jim has direct OSHA compliance and loss-control experience. Karl Sommers III, a TRI associate, has experience as a safety director in a manufacturing environment and leadership duties within professional safety organizations.

Training Environments

SafeSchools is ideal for a blended learning environment, complementing in-service or video training, or as a stand-alone training course. The *SafeSchools* approach engages the learner in an e-learning environment, while a Compliance Management System automatically tracks user progress through the courses. This assists the district administrator in demonstrating compliance.
